

BatchMaster Manufacturing for Microsoft Dynamics GP

Ensure your company's success with a proven process manufacturing solution that can support your end-to-end business requirements.

Our Industry Specific Solution

BatchMaster Manufacturing for Microsoft Dynamics GP is designed to meet the unique needs of formula-based manufacturers in such industries as Food & Beverage, Nutraceuticals, Chemicals, Cosmetics, and Life Sciences. Our integrated solution effectively manages all the manufacturing complexities inherent to the products, processes, and variables in these process manufacturing industries. With your Microsoft login, you will have access to real-time, accurate manufacturing data and will be able to run BatchMaster processes from within your GP menu.

BatchMaster Manufacturing for Microsoft Dynamics GP

Your Software Provider

For over 25 years, BatchMaster Software has helped process manufacturers bring their products to market faster, while reducing costs and complying with ever more stringent regulatory requirements. Our industry focused staff keeps tabs on the latest trends, challenges, regulations, and best practices in your industry, as well as the latest technology advances, ensuring that these areas are addressed in our current and future products and services. And our services staff provides you with educational materials and consulting support to ensure you recognize the maximum benefits from your investment.

BatchMaster Manufacturing Features

BatchMaster Manufacturing is a proven set of software modules embedded within the Microsoft Dynamics GP application. The product suite consists of product o35

Lab & Formulation:

Dynamically adjust formulas during both product development and production to meet specified target physical or nutritional characteristics.

BOM Packaging:

Manage raw materials, costs, and instructions for sub-assembly and top-level packaging separate from formulas.

Batch Production:

Create and schedule the optimal number of batch jobs required for a product formula and its multiple packaging configurations, based upon the aggregate demand for the given product.

Quality Control:

From vendor inspection plans to formula and finished good QC testing, establish a comprehensive QC program that ensures the delivery of quality products to your customers.

Traceability & Compliance:

Keep compliant with industry-specific and federal regulations, in terms of labeling, lot traceability reports, transactional audit reports, and shipping documentation.

Product Costing:

Roll up existing and theoretical product costs, as well as fixed, tiered, and scalable costs, to formulas, intermediates, and finished goods during product development.

Inventory:

Manage inventory based upon quality status, units of measure, expiration date, lot number, strength, license, serial number, and location to ensure the right inventory is available for manufacturing and distribution activities.

Planning & Scheduling:

Gain granular visibility to available raw material, intermediate, and finished goods inventories, as well as current batch production jobs, in order to employ economies of scale when negotiating purchasing discounts and optimizing batch production schedules.

Mobile / Warehousing:

Employ handheld RF devices to execute inventory movements and adjustments within one or more facilities, including receiving, putaway, cycle counting, production, pick, pack, and ship tasks.

Solution Benefits

- Effortlessly meet changing customer demands and ever stringent industry regulatory mandates.
- Streamline processes to quickly scale batch production and bring products to market faster.
- Aggregate, consolidate and optimize production and purchasing processes to reduce costs.
- Gain a granular view of accurate, real-time manufacturing data to make more informed decisions, faster.
